Arman Dabiri

Lead IT & Infrastructure Engineer | AWS Cloud & Hybrid Infrastructure Engineer
Los Angeles, CA 90035 | (424) 744-7374 | arman_dabiri@hotmail.com | LinkedIn | GitHub | Portfolio

Summary

IT & Infrastructure Engineer with hands-on experience supporting AWS and hybrid environments across robotics, healthcare, dental, and managed services organizations. Currently serves as the dedicated lead engineer for COCO Delivery / Cyan Robotics through Network Experts, overseeing IT operations, endpoint management, identity, networking, security, and technical escalations. Focused on building reliable, secure, and maintainable infrastructure through practical automation.

Key Skills & Technologies

- **Cloud Platforms**: AWS (EC2, S3, VPC, IAM, RDS), AWS Infrastructure Deployment, AWS WorkSpaces Deployment, Microsoft Azure
- **Automation & IaC**: Terraform, AWS CloudFormation, Bash, PowerShell, Microsoft Power Automate, Zapier
- **Networking & Security**: SonicWall, Cisco Firepower, VPN, Fortinet ZTNA, AWS Security Controls Knowledge, Networking For End-user Computing, Ubiquiti UniFi (Gateways, Switching, Wi-Fi), UniFi Protect & UniFi Access, macOS Hardening (CIS) & FileVault
- **Dental Software**: Carestream, Dentrix, Dentrix Ascend, Eaglesoft, OpenDental, Fuse, Dexis, Apteryx
- **System Administration**: Linux (RHEL, Ubuntu, CentOS), Windows Server, VMware vSAN, Active Directory, Microsoft 365 / Office 365, Systems Engineering, Backup, Disaster Recovery, Storage Infrastructure, Patch Management, Cohesity, Application Management, Virtualization, Application Migration Technologies, Kandji (MDM), Apple Business Manager, Google Workspace Administration, Entra ID (Azure AD), Device Lifecycle Management
- **Monitoring & Compliance**: AWS CloudWatch, PRTG, Huntress, Atera, Security & Governance, Linear (Incident & Escalation Management)
- **Consulting & Project Leadership**: Customer-facing Consulting, Project Roadmap Development
- **Familiar**: CI/CD Pipelines, DevOps, Ansible, Kubernetes fundamentals (CKA prep: RBAC, probes, storage, troubleshooting)

Professional Experience

Network Experts, Inc. (COCO Delivery / Cyan Robotics client engagement)
Lead IT & Infrastructure Engineer - COCO Delivery (Client Engagement) — *Los Angeles, CA* · **Jun 2026 - Present**

- Lead COCO's day-to-day IT and infrastructure operations, including identity, endpoint management, security, and technical escalations, while implementing Rippling SSO to improve access management and employee onboarding.
- Own endpoint management and security for the device fleet using Kandji, Apple Business Manager, Atera RMM, and Huntress EDR, ensuring full compliance with security policies and maintaining a secure device lifecycle
- Administer Google Workspace identity and access, managing user and group provisioning, security policies, and onboarding/offboarding to maintain secure and consistent account lifecycle management.
- Manage multi-site UniFi network, surveillance, and access-control infrastructure to maintain reliable connectivity, security, and centralized administration across locations.
- Implement endpoint security and compliance controls, including FileVault encryption, CIS-aligned macOS hardening, and MDM policies, standardizing security configurations across managed endpoints.
- Own IT incident response and escalations through Linear, coordinating with engineering and leadership to prioritize issues and support timely resolution across IT operations.
- Lead device lifecycle management, including onboarding, provisioning, secure redeployment, and offboarding, to provide consistent and secure endpoint configurations across the organization.
- Serve as COCO's dedicated Network Experts technical resource, supporting and modernizing SaaS, identity, endpoint, and network systems with Google Workspace, Rippling, Kandji, and UniFi.

Network Experts, Inc.
Platform / Infrastructure Engineer (Hybrid) — *Beverly Hills, CA* · **May 2024 - Present**

- Owned and operated hybrid infrastructure (Windows Server, Linux, VMware, AWS, Azure) across multiple healthcare and dental sites, improving system reliability and security
- Implemented identity and access controls with Active Directory, Entra ID (Azure AD), Okta, and Duo, adding MFA, SSO, and lifecycle processes, which reduced unauthorized access incidents
- Designed standardized infrastructure patterns and automated cloud foundations and operational tasks with Terraform, CloudFormation, PowerShell, and Bash, speeding up deployment cycles
- Led on-prem and cloud migrations of directory services, file services, and line-of-business apps, achieving minimal downtime
- Designed and maintained backup and disaster recovery solutions, regularly validating restores to ensure business continuity requirements were met
- Conducted M365 tenant assessments for SMB clients, auditing Power Automate flows and SharePoint governance to surface automation gaps and deliver prioritized remediation roadmaps.

Systems Engineer (Operations & Automation) *Beverly Hills, CA* · **Sep 2023 - May 2024**

- Provided systems engineering support for Windows, macOS, and Linux platforms in regulated healthcare settings, applying security-hardening procedures that ensured compliance and reduced support tickets
- Administered Active Directory and Microsoft 365 environments with PowerShell and Group Policy, strengthening authentication and access control and lowering unauthorized-access incidents
- Operated endpoint monitoring and security platforms (Atera, Huntress), responding to incidents and maintaining SLA targets.
- Supported backup and recovery operations with Synology, Axcient, and Microsoft 365 retention tools, conducting regular restore tests that confirmed data could be recovered within required recovery time objectives
- Assisted in standardizing system configurations and documentation to reduce recurring operational issues.

Medis Holding

System Administrator *Shiraz, Fars Province, Iran* · **Jun 2020 - Jul 2023**

- Administered 60+ physical and virtual servers across Windows, Linux, and macOS environments, ensuring high availability and performance.
- Designed and operated VMware vCenter and vSAN clusters, managing capacity and system reliability.
- Managed core infrastructure services-Active Directory, DNS, DHCP, file shares, and backup solutions-using Group Policy and Veeam, ensuring consistent service availability and successful daily backups
- Implemented monitoring, networking, and disaster recovery improvements that reduced downtime and improved recoverability.

Education

Master of Science - MS, Information Technology - Cloud Computing **2023 - 2025**

Westcliff University

- **GPA:** 3.92/4.0
- **Achievements:** Founder's Scholarship for Information Technology (Graduate)

Bachelor's degree, Electrical, Electronics and Communications Engineering **2017 - 2021**

Shiraz University of Technology

- **GPA:** 3.14/4.0
- **Achievements:** Ranked Among Top 3% of University Entrance Exam for Bachelor's Degree, B.Sc. Thesis: Design and Development of an Automated Access Control System

Certifications

- HashiCorp Certified: Terraform Associate (004)
- AWS Certified Solutions Architect - Associate
- Amazon Web Services Cloud Practitioner
- Okta Certified Administrator Hands-On Configuration Exam
- Okta Certified Professional Hands-On Configuration Exam for OIE
- Fortinet ZTNA & SASE Security Certifications
- Certified Ethical Hacker (CEH)
- Certified Security Professional (CSP): Penetration Testing With Kali Linux
- Certified Linux Administrator: LPIC-1, LPIC-2, LPIC-3(304)
- Cisco Certifiend Network Associate: CCNA - R&S
- Microsoft Certified Solutions Associate: Windows Server 2016
- CompTIA Network+

Projects & Achievements

1. Neti | Website AI Assistant Case study and AWS architecture

Network Experts, Inc.

- Designed, built, and launched Neti, an AI assistant for Network Experts.
- Developed an assistant that answers visitor questions using only reviewed and approved website content.
- Enabled the assistant to direct visitors to relevant service pages and offer team follow-ups with user review and consent before submission.
- Built a scalable AWS backend using API Gateway, Lambda, DynamoDB, and Amazon Bedrock to handle API requests, process user queries, manage data, and generate AI-powered responses.
- Integrated Amazon Bedrock Knowledge Bases with S3 Vectors and Bedrock Guardrails for secure, grounded AI responses.
- Implemented multiple validation layers, including claim verification, safety screening, and contextual grounding checks, to ensure responses are accurate and based on approved facts.
- Automated infrastructure deployment using Terraform, with separate development and production environments, scoped deployment plans, and automated validation checks for reliable releases.
- Established controlled release workflows with scoped deployment plans and automated checks before and after re-enabling the assistant.

2. OpenDental Multi-Site Hybrid Infrastructure Deployment

- Architected and deployed a centralized OpenDental environment supporting **five dental locations**, integrating Windows Server 2022, Hyper-V, IIS Middle Tier, Active Directory, RDS, and secure file services.
- Migrated and synchronized site data using **MariaDB replication** and established secure site-to-site VPN connectivity across SonicWall and UniFi networks.
- Implemented **HTTPS-based OpenDental Middle Tier**, SFTP image access, and standardized remote access for **25+ call-center users**.
- Led site cutovers and resolved database, replication, VPN, certificate, and application connectivity issues throughout deployment and production rollout.

3. M365 Tenant Audit & Automation Recovery - Champion Injury Attorneys

- Onboarded and assessed a law firm client's Microsoft 365 environment, inventorying 16 Power Automate flows and 12 SharePoint sites across the tenant.
- Authored the Operations Cookbook - a comprehensive runbook documenting all automation flows, SharePoint structure, connection dependencies, and remediation procedures.
- Diagnosed and restored Power Automate connections broken by a credential rotation event, recovering critical mail and incident report workflows with zero data loss.
- Delivered a prioritized remediation roadmap covering dormant flows, Planner integration bugs, and reauth requirements; established ongoing managed-services relationship.
